CONSTRUCTION

Everything is for a better World
Все для лучшего мира

About us

TEKDEM Construction quarter century of experience in Turkey and the world has been involved in many projects with many well-known companies. Our company, which is aiming to grow with changing and constantly renewing technology, has accomplished great success by using its dynamic and experience in its overseas projects.

О нас

Tekdem CONSTRUCTION имеет 25 лет опыта в Турции и в мире. Принимал участие в создании проектов совместно со многими известными компаниями. Наша компания, которая стремится расти с изменяющимися и постоянно обновляющимися технологиями, добилась больших успехов, используя свою динамику и опыт в зарубежных проектах.

Our vision

To make sustainable contributions in all areas of life while focusing on entrepreneurship, innovation and reliability in our business line.

Наше видение

Сделать устойчивый вклад во все сферы жизни, уделяя особое внимание предпринимательству, инновациям и надежности в нашей сфере деятельности.

Our mission

To be included among the most successful groups nationally. By creating added value for humanity and economy, while respecting the environment and our competitors and having an entrepreneurial and leading spirit, and meanwhile, making contributions to the welfare of our country and of the geographical areas we operate in.

Наша миссия

Быть включенным в число самых успешных групп на национальном уровне. Создавая преимущественную ценность для человечества и экономики, уважая при этом окружающую среду и наших конкурентов, проявляя дух предпринимательства и лидерства, и в то же время внося вклад в благосостояние нашей страны и географических регионов, в которых мы работаем.

Building

In today's technology, buildings are constructed both in steel and concrete. With our experienced staff working in the fields of Concrete or Steel Construction, precision and perfectionism is our motto in our line of work. Design and layout projects of buildings are projected by our expert technical staff. Statical calculations are made based on the geographical features where the building is located and detailed drawings are prepared.

Строительство

Технологии современности позволяют строить здания как из стали, так и из бетона. Девиз нашего опытного персонала, работающего в области бетонного и стального строительства - точность и перфекционизм - в работе. Проектирование и планировка проектов зданий осуществляется нашими опытными техническими специалистами. Статические расчеты производятся с учетом географических особенностей, в которых расположено здание, и подготавливаются подробные чертежи.

Restoration

Many of the buildings that survived until today are made of wood. Each construction category has its own building techniques. Therefore, restoration of wooden structures is a hard task that requires experience, a high discipline and special care. Unconscious and incorrect application may result in undesired outcomes. Therefore, our company performs restoration works successfully with its qualified staff.

Реставрация

Многие из сохранившихся до наших дней зданий сделаны из дерева. Каждая категория зданий имеет свою собственную технику постройки. Поэтому реставрация деревянных конструкций - сложная задача, требующая опыта, высокой дисциплины и особой тщательности. Бессознательное и неправильное применение может привести к нежелательным результатам. Поэтому наша компания успешно выполняет реставрационные работы со своим квалифицированным персоналом.

Engineering

With the industrialization of society, engineering has become one of the most preferred areas in the choice of professions. Nowadays, rapidly advancing technology increases the interest in engineering profession. Undoubtedly, as the socio-economic and technological developments create new engineering professions, the number of professions in the domain will also increase. Dedicating itself to engineering and engineering ethics while following these developments, our company serves with its expert staff in all engineering areas.

Инженерия

С индустриализацией общества инженерия стала одной из самых предпочтительных областей в выборе профессий. Стремительно развивающиеся технологии повышают интерес к инженерной профессии. Поскольку социально-экономические и технологические разработки создают новые инженерные профессии, число кадров в этой области также будет увеличиваться. Посвящая себя инженерии и инженерной этике, наша компания работает со своим опытным персоналом во всех областях строительства.

Industrial

Industry is a field of activity where mass production is performed by changing the quality or from of a material or a force using machinery and similar tools on a continuous basis or at some periods of time. As competition makes world smaller, change affects even countries within a short period of time. Entities that cannot realize competition and change on time either completely disappear or are renewed et the expense of heavy financial costs.

Промышленность

Промышленность - это сфера деятельности, в которой массовое производство осуществляется путем изменения качества материала, с помощью машин и различных инструментов на постоянной основе или в определенные периоды времени. Поскольку конкуренция делает мир уязвимым, изменения затрагивают страны в течение короткого периода времени. Неконкурентоспособные субъекты либо полностью исчезают, либо обновляются за счет больших финансовых затрат.
